NAV Strike	Monthly
Liquidity	Monthly (60 days notice)
Fund Manager	Corton Capital Inc.
Investment Manager	Astra Asset Management UK Limited

## Fund overview

The Relevance Diversified Credit Fund focuses on mis-priced credit instruments to deliver performance for investors with reduced volatility. Changes in the regulatory environment have resulted in imbalanced credit pricing that ranges from highly overpriced investment grade liquid instruments to deeply underpriced complex credit risk. The managers exercise strict discipline through the analysis of overall risk including collateral, duration and legal structure. Investors benefit from the managers in-depth expertise both in evaluating credit as well as the origination of different credit instruments.

## Strategies

### Catalyst driven credit:

Investments with solid credit fundamentals and an identifiable value catalyst.

### Direct Origination:

Bespoke lending opportunities on high value collateral assets.

### Tactical credit:

Opportunistic credit trading largely driven by regulatory considerations.

### Short opportunities:

Gain edge through thorough analysis of credit fundamentals and fair value.

## Strategy breakdown

Tactical credit	68%
Catalyst driven	23%
Short opportunities	0%
Direct origination	9%

## Investment manager profile

Corton Capital Inc. has been engaged to act as an exempt market dealer in connection with the distribution of securities of the Fund and was appointed as the investment fund manager and portfolio manager of the Relevance Diversified Credit fund in Canada. The sub-advisor to the fund is Astra Asset Management Co. who is an award-winning London, UK based specialist credit and debt fund manager. Operating primarily in US and European debt markets, Astra has delivered uncorrelated returns through in-depth individual security analysis. Partnered in Canada with Relevance Wealth Management, Astra brings unique alternative credit strategies to Canadian institutions, pension funds, endowments and individual investors.

Astra's core competency is valuing, originating, and restructuring high quality collateral and debt instruments. Unlike most managers, Astra does not rely on simply buy/sell decisions; they take an active role in negotiating deal terms, originating and constructing trades in addition to working with issuers and borrowers. They create value through the identification of undervalued, misunderstood, overlooked and orphaned securities. The investment committee's average 20 years of direct experience (acquired at major global banks), investment focus and connectivity to market participants are key differentiators.

This rating is based on how much the fund's returns have changed from year to year. It does not tell you how volatile the fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.

## Geographic breakdown

Europe	84%

## Strategies for success in alternative credit

**Team experience:** Canada introduced regulatory reform to allow greater access to liquid alternatives in January 2019. The same regulatory reform took place in the UK in 1993 and 1940 in the United States. This has led to far greater assets in alternatives in these countries as well as depth of manager talent.

**Strategy:** What strategies does the firm implement, are they simple to understand and do they make sense? There is a wide range of strategies within alternatives with escalating complexity. Make sure you can understand what you are investing in, how the manager is generating returns and whether it's repeatable or not.

**Track record:** Managing money is one thing, being a consistent top performer is another. While the performance of a manager can jump around from year to year finding one that has a consistent track record of results versus promises of results is a good starting point. A firm's long-term track record is one of the most reliable metrics of relative skill.

**Risk:** What is your downside? Upside is great but if you can't protect your gains it can be for naught.

This rating is based on how much the fund's returns have changed from year to year. It does not tell you how volatile the fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.
